	Pimpri Chinchwad Education Trust's **Pimpri Chinchwad College of Engineering**	
	Assignment No.2	

Name: Shreeya Patil
PRN No: 123B1B225

Subject: Full Stack Development Lab
Div: T.Y. D

Aim:
Design a Personal Portfolio Page using HTML and CSS. Use bootstrap CDN if required.

Theory:

1. Structure and Semantic Layout

I have utilized **HTML5 semantic elements** to create a well-structured and organized portfolio website. The content is divided into logical sections such as Hero (Introduction), About, Education, Skills, Certifications, Projects, Achievements, and Contact.

I implemented a **sticky navigation bar** using Bootstrap that remains fixed at the top of the viewport, ensuring smooth and easy navigation throughout the website. Internal linking is achieved using unique id attributes for each section, enabling seamless scrolling between different parts of the portfolio.

The hero section is designed using a two-column layout to professionally display my introduction, resume button, and social links on one side, and my profile image on the other.

2. Styling with CSS Architecture

I designed the website using a consistent **Dark & Orange theme**, where black is used as the primary background, white for readable content, and orange as the accent color for headings, buttons, borders, and hover effects. This creates a strong visual contrast and professional appearance.

Flexbox & Grid:
I used Bootstrap's Grid system to structure the layout into responsive rows and columns. Flexbox is utilized for aligning elements such as social icons, achievements, and navigation links to ensure proper spacing and alignment.

Responsive Design:
The portfolio is fully responsive using Bootstrap's responsive classes and layout utilities. The navigation bar automatically collapses into a toggle menu on smaller screens, ensuring mobile compatibility.

Interactive Design:
I implemented CSS transitions and hover effects on project cards using transform: translateY() and box-shadow effects to create a smooth lifting animation. JavaScript is used to highlight the active navigation tab, enhancing user interaction.

3. Professional Integration and Assets

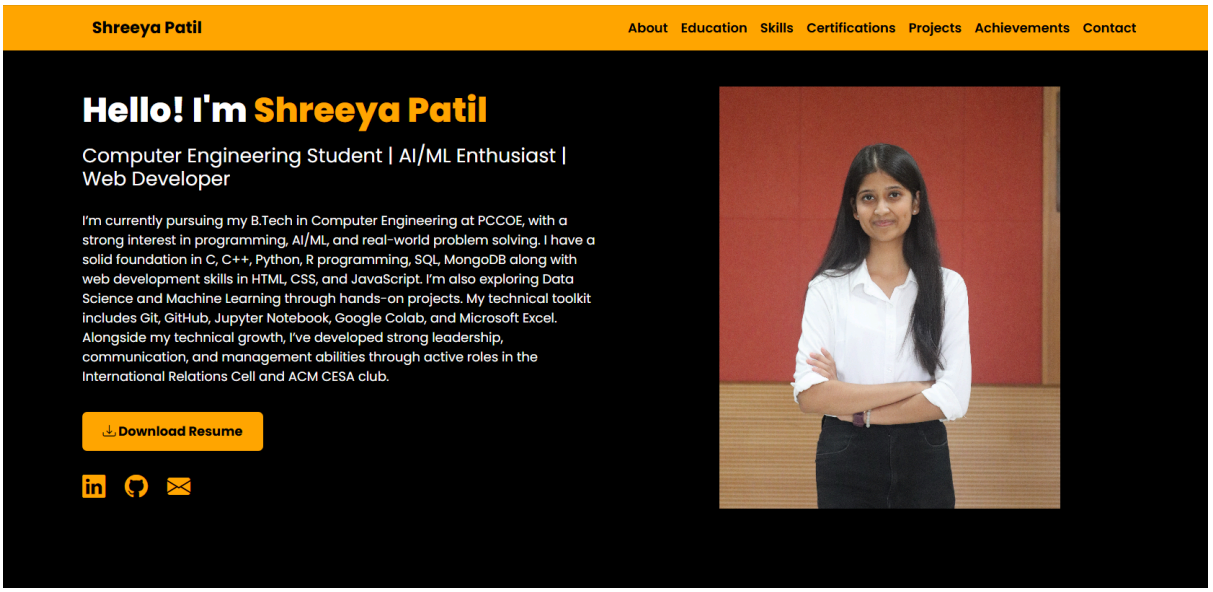

I integrated **Bootstrap Icons** for scalable and lightweight vector icons to represent skills, achievements, and social media links. Google Fonts (Poppins) is used to enhance typography and maintain a clean, modern appearance.

The portfolio includes a **Download Resume** feature using the HTML download attribute, allowing visitors to directly access my CV. Certifications are linked to their respective PDF files, making the portfolio functional and professionally accessible.

Additionally, I integrated direct links to my LinkedIn, GitHub, and Email to provide immediate professional connectivity and verification of my technical background.

Overall, the website functions as a responsive, interactive, and professionally structured digital portfolio rather than just a static webpage.

Output:

Education

B.Tech Computer Engineering
PCCOE, Pune | CGPA: 8.5 | 2027

HSC
CIS, Baramati | 84.67% | 2023

SSC
KNB PSS, Phaltan | 100% | 2021

Skills

C
C++
Python
R Programming
HTML
CSS
JavaScript
Bootstrap
SQL
MongoDB
Machine Learning
Data Science
Data Structures
Algorithms
Git
GitHub

Certifications

Python Certification

Projects

Supply Chain Management

Developed a full-stack MERN platform connecting farmers and retailers. Implemented authentication, real-time inventory tracking, and secure transaction management. Improves transparency and reduces middlemen in agricultural supply chains.

Travel Recommendation System

Built a personalized travel recommendation system using data mining techniques. Applied clustering and similarity algorithms to suggest destinations based on user preferences. Developed using Flask with interactive UI integration.

Startup Success Prediction

Designed a deep learning classification model using TensorFlow and Keras. Performed data preprocessing, feature scaling, and model optimization. Predicted startup success probability based on real-world investment datasets.

Achievements

5⭐ on HackerRank in C++ and Problem Solving.

Active on LeetCode coding platform.

Participated in Smart India Hackathon.

Selected for Indradhanush Grand Challenge.

Copyrighted Supply Chain Management Project.
