	Pimpri Chinchwad Education Trust's **Pimpri Chinchwad College of Engineering**	
	Assignment No.3	

Name: Shreeya Patil **Subject:** Full Stack Development Lab
PRN No: 123B1B225 **Div:** T.Y. D

Aim: Design a dynamic web app like fashion store / E- Commerce product using HTML, CSS&JS. Also use bootstrap CDN if required.

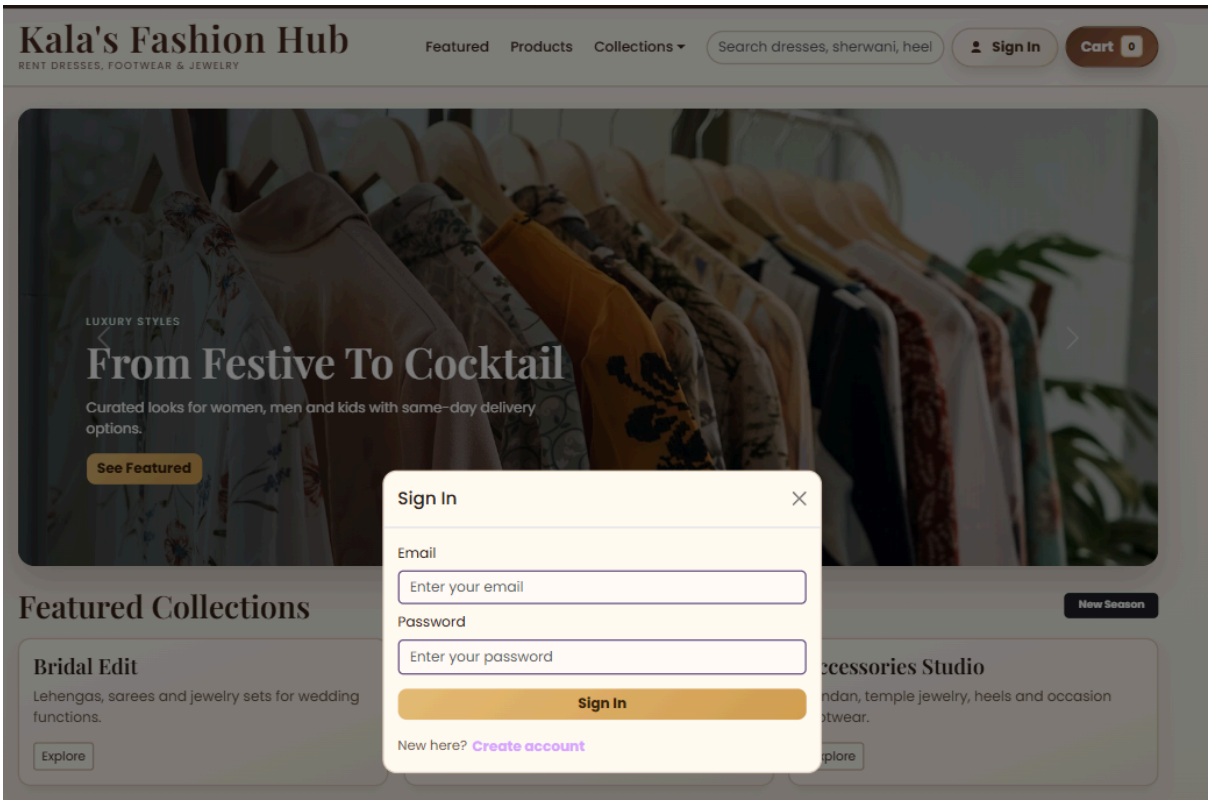

Theory: Online Fashion Rental Website

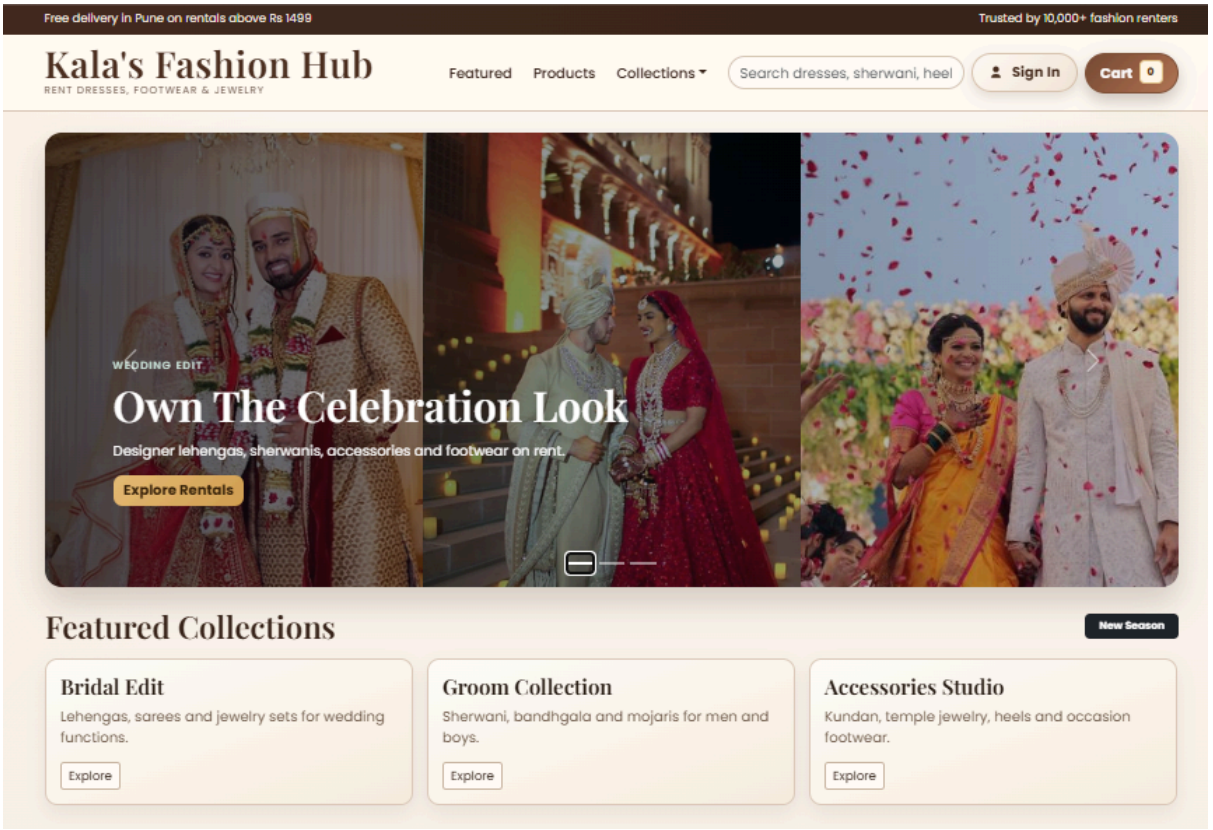

The **Online Fashion Rental Website** is a web-based platform designed to allow users to browse, select, and rent fashion products such as dresses, footwear, and jewelry for a limited period. Instead of purchasing expensive outfits for one-time events like weddings, parties, or cultural occasions, users can rent them at an affordable daily price. The website provides an interactive product catalog where users can filter items based on audience (Men, Women, Kids), product type (Dress, Footwear, Jewelry), and popularity or price. It also includes features such as product search, sorting, rental date selection, size selection, quantity selection, and a cart system that calculates the total rental amount based on the number of days. User authentication is implemented so that customers can create accounts, sign in, and manage their rental selections securely. The system also uses local storage to maintain user sessions and cart data, providing a seamless user experience without requiring a backend server.

Tech Stack Used

The website is developed using **HTML, CSS, JavaScript, and Bootstrap**, which together form the front-end technology stack. **HTML (HyperText Markup Language)** is used to structure the web pages and define elements such as product cards, forms, modals, and navigation bars. **CSS (Cascading Style Sheets)** is used to design the layout, color scheme, and responsive styling of the website, making the interface visually appealing. **Bootstrap**, a popular front-end framework, is used to create responsive layouts, modals, cards, alerts, and navigation components quickly and efficiently. **JavaScript** handles the dynamic functionality of the website, including product filtering, sorting, search operations, rental calculations, cart management, and user authentication logic. The system also uses the **Local Storage API** of the browser to store user accounts and login sessions, enabling persistent data without a database. Additionally, features like **Intersection Observer for scroll animations**,

Bootstrap modals for interactive forms, and **image fallback handling** enhance usability, performance, and visual experience of the platform.
