	Pimpri Chinchwad Education Trust's **Pimpri Chinchwad College of Engineering**	
	Assignment No.4	

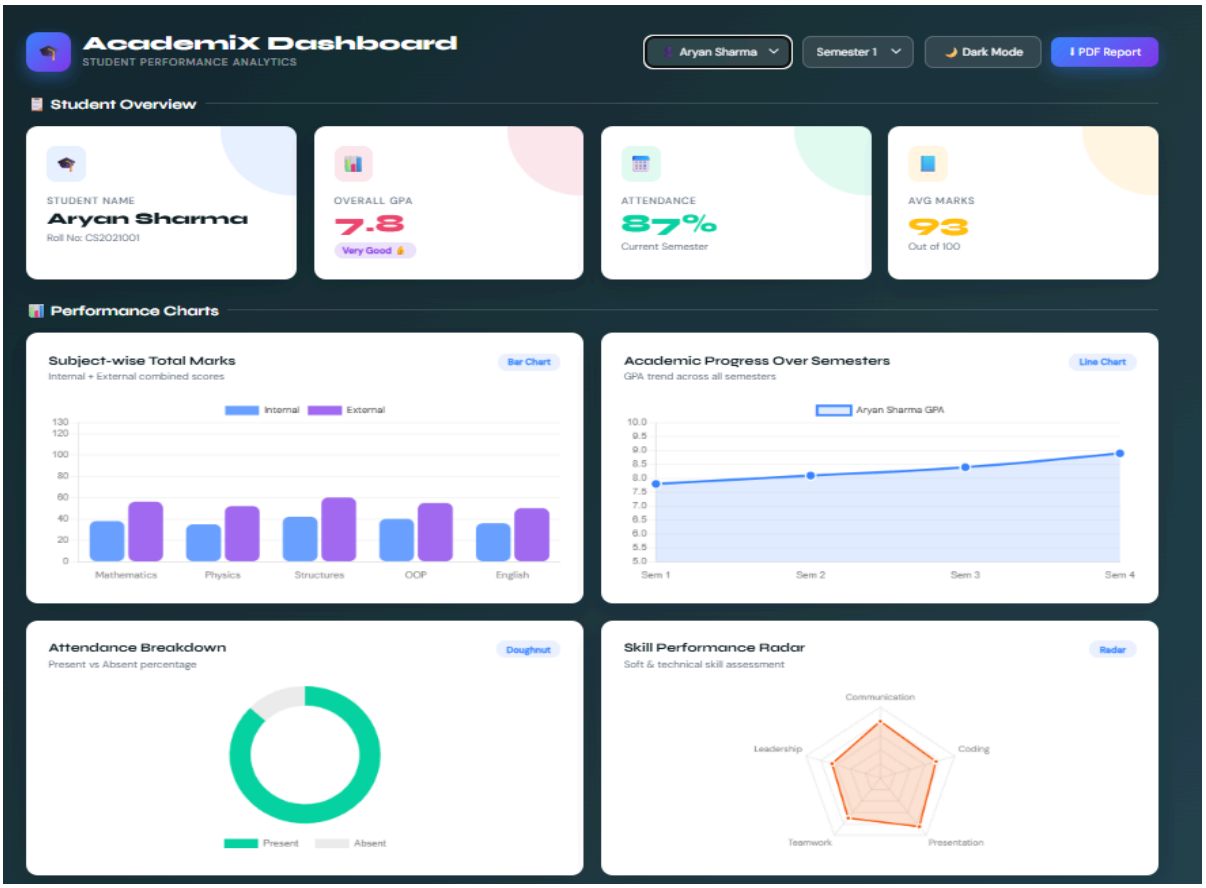

Name: Shreeya Patil **Subject:** Full Stack Development Lab
PRN No: 123B1B225 **Div:** T.Y. D

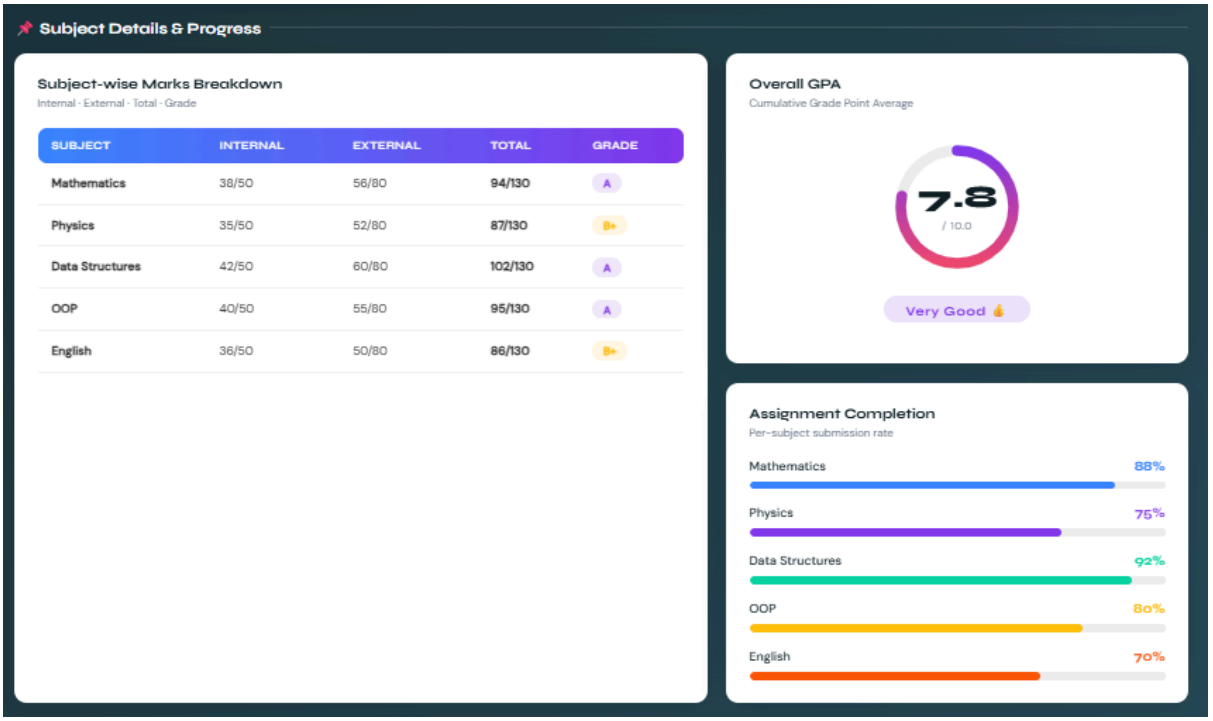

Aim: Create any interactive data visualization dashboard for any real-life application like weather dashboard. Visualize data using charts and graphs (use libraries like Chart.js or D3.js).

Theory : The Student Academic Performance Dashboard is an interactive web-based system designed to monitor and analyze students' academic records in schools and universities. It visually represents important academic data such as subject-wise marks, attendance percentage, GPA, and semester-wise progress using charts and graphical indicators. Instead of manually analyzing spreadsheets or paper records, the dashboard provides a clear and structured overview of student performance, helping teachers and administrators quickly identify strengths, weaknesses, and performance trends. Features like student selection, semester filtering, summary cards, and interactive charts make the system efficient, user-friendly, and suitable for modern educational institutions.

The dashboard is developed using HTML, CSS, JavaScript, and the Chart.js library. HTML structures the layout, CSS enhances the visual appearance with professional themes and responsive design, and JavaScript enables dynamic interactivity and real-time updates when filters are changed. Chart.js is used to create bar charts for subject-wise marks, line charts for academic progress, doughnut charts for attendance, and radar charts for skill analysis. Together, this technology stack ensures smooth animations, responsive behavior, and visually appealing data representation, making the system an effective tool for academic performance monitoring and data-driven decision-making.

Output :

AcademiX Dashboard
