Assignment No : 5

Name : Shreeya Dhairyashil Patil
PRN : 123B1B225
Div & Batch : D (D1 Batch)
Sub : FSDL

Title : Create a simple functional college website / travel agency website / insurance website usingNode.js and Express using any NoSQL data set like MongoDB if required.

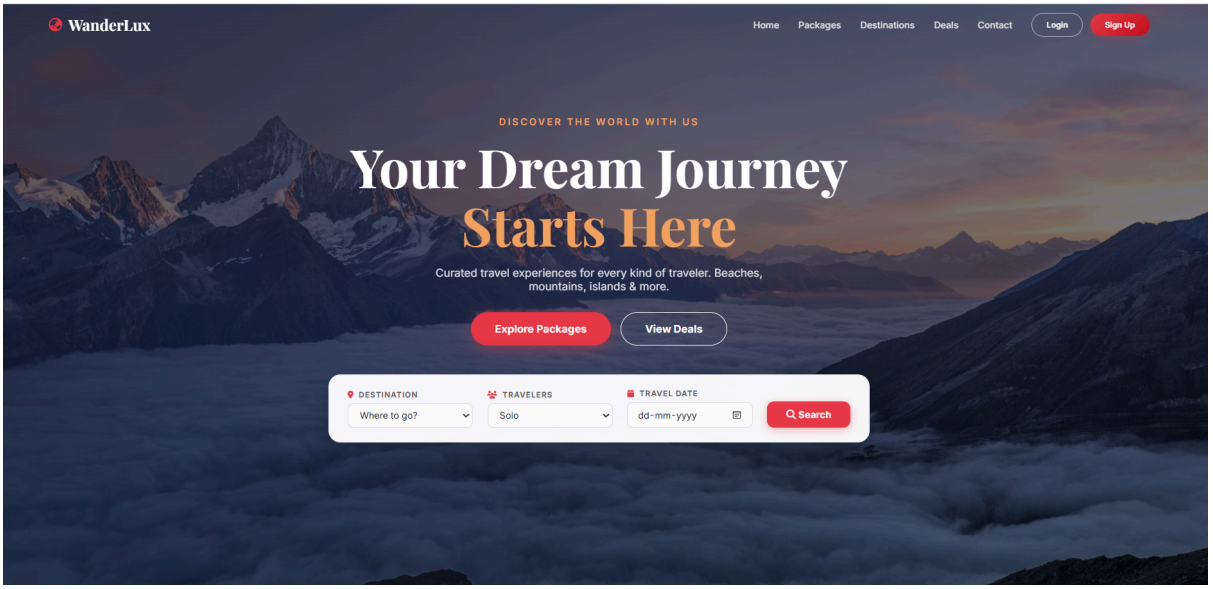

Theory : The WanderLux project is a full-stack travel agency website developed using modern web technologies, where the frontend is built using HTML, CSS, and JavaScript, and the backend is implemented using Node.js and Express.js. The system follows a client-server architecture, where the frontend acts as the user interface and communicates with the backend through RESTful APIs. The backend server, built with Express.js, is responsible for handling HTTP requests, routing, business logic, and data processing. MongoDB, a NoSQL database, is used to store and manage application data such as user credentials, travel packages, and booking records in a flexible JSON-like format.

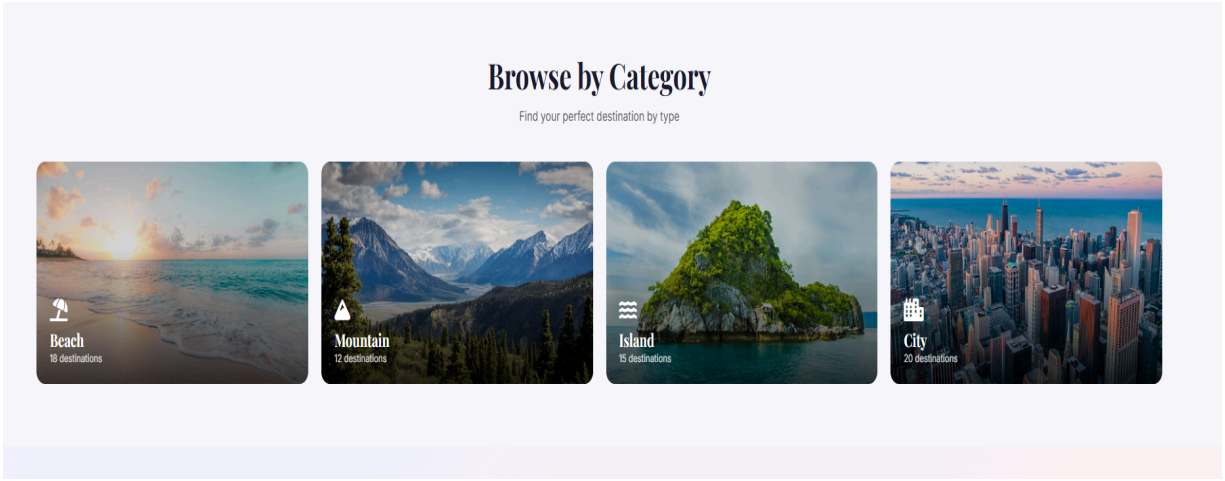

On the frontend, the application is designed as a responsive single-page application (SPA) that includes multiple sections such as the home page, packages catalog, package details, booking flow, payment interface, and user dashboard. It provides an interactive user experience with features like dynamic filtering of packages based on category, traveler type, and budget, real-time price calculation based on the number of travelers, and visually appealing components such as cards, modals, and navigation menus. JavaScript is extensively used for DOM manipulation, event handling, and asynchronous API calls (using fetch or AJAX) to communicate with the backend.

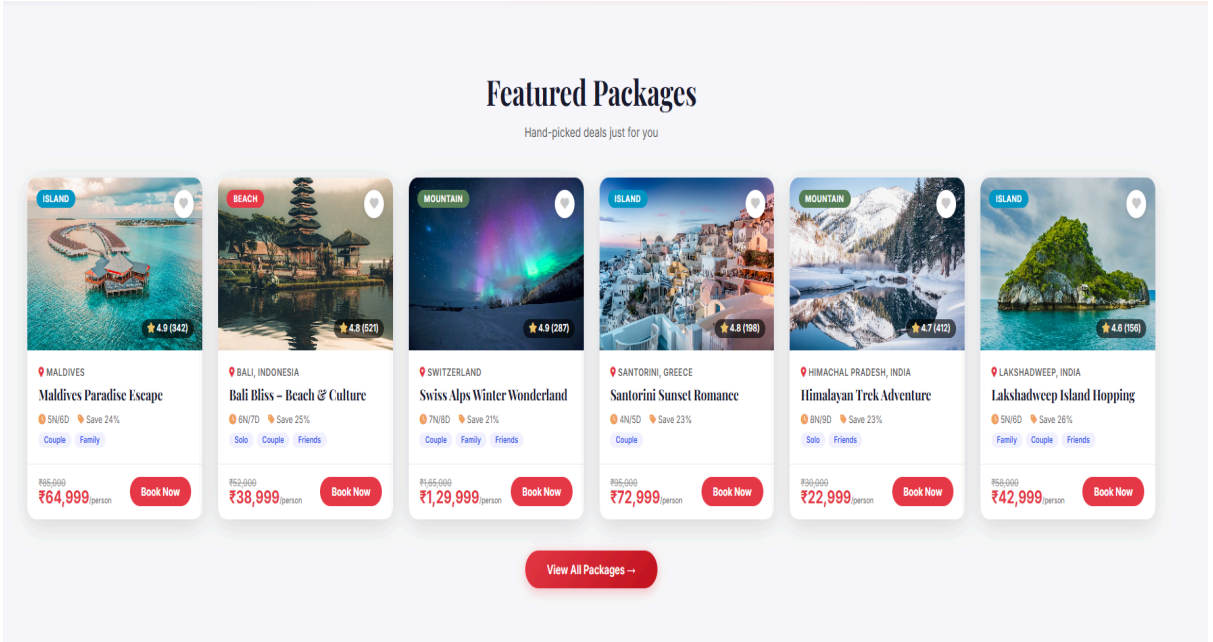

The backend implements core functionalities such as user authentication (signup and login), session or token-based authentication, package management, and booking processing. User data is securely stored in MongoDB, often with password hashing for security. The booking system allows users to submit personal and travel details, select add-ons, and proceed through a structured payment workflow. Although the payment system may be a mock implementation, it simulates real-world payment gateways and transaction handling. The backend also supports features like booking history retrieval, invoice generation, and user-specific data access.

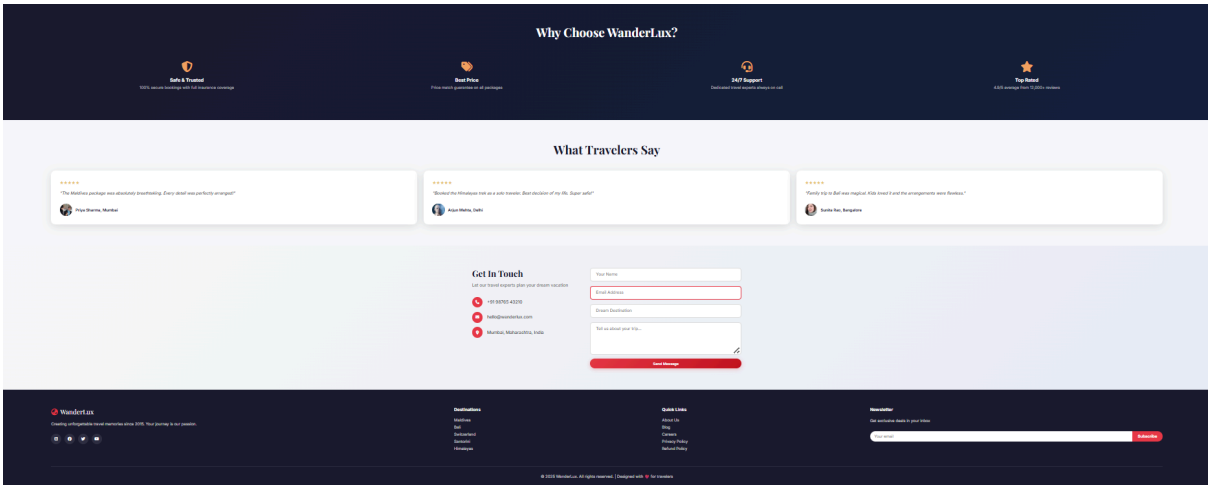

Additionally, the project ensures data persistence and consistency by storing all relevant information in the database instead of relying solely on client-side storage. The use of Express middleware enhances functionality such as request parsing, authentication validation, and error handling. Overall, WanderLux demonstrates key full-stack development concepts including frontend-backend integration, REST API design, NoSQL database usage, state management, and responsive UI/UX design. It provides a scalable and modular structure that can be further extended with real payment gateways, admin dashboards, and advanced features in a production environment.

About This Trip

Bali is a feast for the senses. From the mystical temples of Ubud to the surf-perfect beaches of Seminyak, this tropical paradise has something for every traveler. Experience local culture, incredible food, and stunning landscapes.

What's Included

Flights · Hotel · Breakfast · Airport Transfer · Photo Tour · Scooter Rental

Itinerary

DAY 1
Arrive in Denpasar. Transfer to Seminyak hotel. Sunset at Tanah Lot temple.

DAY 2
Morning surf lesson at Kuta Beach. Afternoon explore Seminyak markets.

DAY 3
Ubud day trip: Sacred Monkey Forest, Tegallalang Rice Terraces, art galleries.

DAY 4
Balinese cooking class. Visit Goa Gajah elephant cave.

DAY 5
Mount Batur sunrise trek. Spa and wellness afternoon.

DAY 6
Nusa Penida day trip: Kelingking Beach, Angel's Billabong, Broken Beach.

DAY 7
Last-minute shopping at Seminyak. Departure transfer.

~~₹52,000~~ **₹38,999** / person

Conclusion : The WanderLux project successfully demonstrates the development of a full-stack web application by integrating frontend and backend technologies to create a complete travel booking system. Using HTML, CSS, and JavaScript for the user interface along with Node.js and Express for server-side functionality, the project provides a seamless and interactive user experience. The use of MongoDB ensures efficient storage and management of user data, travel packages, and booking information. Key features such as user authentication, package browsing with filters, detailed itineraries, booking workflow, and booking history highlight the practical implementation of real-world web application concepts. This project enhances understanding of RESTful APIs, database integration, and client-server communication. Overall, WanderLux serves as a strong foundation for building scalable and production-ready applications, and it can be further extended with advanced features like real-time payment gateways, admin control panels, and enhanced security mechanisms.
